

SOLUTIONS FROM THE ACT GROUP

made SIMPLE

A newsletter published by ACT to help
make your
material handling
SAFER, CLEANER, &
MORE PRODUCTIVE.

**Do you need a better way to measure the dry material in your silos and bins?
The ACT Group wants to help with the ABB level indicators for dry material level measurement.**

ABB lasers include the following features:

- Ability to measure any surface at any angle.
- Very narrow beam and very fast response.
- Increase productivity and increase life of equipment.
- Allow uninterrupted flow of production.
- Measures any surface at any angle.
- Rugged and robust aluminum enclosure.
- No special configuration software required.
- Quick easy installation and simple setup.

The **LM80 and LM200 Laser Level sensors** are a line of level detection products featuring all digital design that combines accuracy and speed for non-contact, continuous level measurement. The Laser Level sensors are industrial instruments that measure the distance to solid objects or opaque liquids. Typical applications include level measurement in silos and bins and positioning of machinery such as overhead cranes, tipper cars and booms.

The **VM3D** is a new laser volume product used for inventory management. This 3D volumetric scanner system measures the volume of material stockpiles stored out in the open or in large structures like silos, bunkers, domes and sheds. By integrating accurate laser technology into a network of scanning instruments, complex surfaces can be mapped accurately. The system makes use of remote monitoring and data processing services to guarantee data integrity to the level needed for confident stock management and precise auditing.

Customer benefits:

- Non-contact, maintenance free
- Measures any surface at any angle
- Narrow beam
- Measures great distances
- Very accurate
- Rapid response

Industries served:

- Mining and construction
- Aggregates
- Fertilizers
- Chemical processing
- Power generation
- Food and beverage
- Pulp and paper processing
- Petrochemical
