The ACT Group offers replacement blades for its full line of belt cleaners, as well as **retrofit designs** for most other manufacturers' mainframes. With fewer blade changes and less frequent maintenance downtime, bulk material handlers can focus manpower on core activities.

Competitor retrofit blades are available for:

- ◆ Arch Environmental
- ◆ ASGCO
- ◆ Flexco

..... And others.

So why choose the ACT blades?

Read on

Many of the other company's blades are formulated for specific bulk materials or conditions, having started out as a customized solution for an individual customer to help eliminate carryback, reduce spillage and minimize maintenance chores.

The innovative engineered cleaners ACT offers maintain the same contact area, blade angle and pressure to effectively remove material carryback, even as the blade wears down over time.

Conveyor belt cleaner blades offered by **The ACT Group** are available in a wide array of shapes, sizes and materials, designed with the patented Constant-Area Radial Pressure (**CARP**) technology to deliver consistent cleaning throughout all stages of blade life.

Unlike most competing designs, the innovative engineered cleaners maintain the same contact area, blade angle and pressure to effectively remove virtually any type of material carryback, even as the blade wears down over time. With 10-20% more urethane on average in each blade than competing blade designs, our **retrofit replacement blades** are engineered to deliver longer service life and lower cost of ownership. All at an affordable price!
